

Objective:

- Computer Science undergraduate specializing in **Data Science** with hands-on experience in **Full-Stack development (MERN, .NET & Angular)**, **machine learning**, and **data analytics**. Interested in building **scalable backend systems** and **data-driven applications**.

Professional Experience:

AI/ML Intern, May'25 – July'25, Edulyt India, Noida

- Performed **exploratory data analysis (EDA)** on large customer transaction datasets using **Python (Pandas, NumPy)** to identify spending behavior patterns and trends.
- Implemented **data preprocessing pipelines** including missing value handling, feature scaling, and dataset transformation to improve data quality for analysis.
- Applied **K-Means clustering for customer segmentation**, enabling classification of users into behavioral groups for targeted analysis.
- Built **interactive dashboards and visualizations using Tableau** to communicate analytical insights and support data-driven decision making.

Skills & Interests:

- **Languages:** Python (NumPy, Pandas), C/C++, C#, SQL
- **Web Development:** JavaScript, .NET, Angular, React, HTML, CSS, Bootstrap, Tailwind CSS, NodeJS, ExpressJS, MongoDB
- **Databases:** MongoDB, SQL
- **Tools & Technologies:** Git, GitHub, Azure, Netlify, Node Package Manager(npm)
- **Core Concepts:** Data Structures and Algorithms, OOPs

Projects:

Notes App – Full-Stack Note-Taking Application | [GitHub](#)

- Built a full-stack **Notes App** using **React**, **Tailwind CSS**, and **NPM** for the frontend; **Node.js**, **Express.js**, **MongoDB**, and **Mongoose** for the backend.
- Implemented user authentication with **bcrypt**, input validation using **express-validator**, and full CRUD functionality with a clean, responsive UI and secure backend architecture.

Smart Leave Management System – Full Stack (.NET + Angular) | [GitHub](#)

- Developed a full-stack leave management system using **ASP.NET Core Web API and Angular**, allowing employees to apply for leave and managers to approve or reject requests through a role-based dashboard.
- Implemented **RESTful APIs, JWT authentication, and role-based authorization**, ensuring secure access and efficient management of leave workflows.
- Integrated **SQL Server with Entity Framework Core** for database operations and built a responsive UI using **Angular and TypeScript** for real-time leave status tracking.

AI MedForecast: Heart Disease Prediction using Framingham Dataset | [GitHub](#)

- Built a Random Forest-based ML model on the Framingham Heart Study dataset, achieving 85%+ accuracy in predicting 10-year coronary heart disease (CHD) risk.
- Implemented data preprocessing, cross-validation, feature importance analysis, and SHAP explainability to ensure robustness and interpretability of the predictions.
- Designed a scalable pipeline that can be extended to integrate EHR data and other health datasets for broader healthcare applications.

Technical Qualifications:

- NPTEL Python for Data Science
- NPTEL Body Language_ Key to Professional Success
- BTech (CSE & Data Science), Amity University, Noida, India (Sept 2022 – May 2026) (Cumulative GPA: 7.8 / 10)
